

Enterprise Product Schedule

Standard product capabilities and usage measurement

DOCUMENT ID	PS-ENTERPRISE-2026-10	VERSION	2026.10
EFFECTIVE DATE	October 1, 2026	EXECUTION DATE	Not separately executed

This Product Schedule describes the standard Acme Cloud Enterprise edition. It applies when incorporated into an Order Form and is subject to the quantities and specific terms stated in that Order Form.

PS-1 Enterprise edition

The Enterprise edition provides access to the Acme Cloud operations platform, administrative controls, workspace management, usage reporting, and supported identity integrations. Access is limited to the subscription term and contracted quantities in the applicable Order Form.

PS-2 Standard product components

Component	Standard behavior
Named users	Access is assigned to uniquely identified individuals and may be reassigned by an administrator.
Production workspace	Processes live operational data and contributes to metered data-processing usage.
Sandbox workspace	Supports non-production configuration and validation activities.
Advanced analytics	Adds advanced reporting and analysis capabilities when ordered.
Usage reporting	Reports data-processing usage in TB to two decimal places for each monthly measurement period.

PS-3 Standard included usage and overage

The Enterprise edition normally includes 10 TB of data processing during each monthly measurement period. The applicable Order Form may specify a different included quantity.

Data processing above the applicable included quantity is overage usage. Overage is measured in TB, rounded to the nearest 0.01 TB, and charged at the rate stated in the Order Form. Usage counters reset at the start of each monthly measurement period.

PS-4 Workspace provisioning

Acme Cloud provisions the number and type of workspaces identified in the Order Form. Production and sandbox workspaces have separate configuration and access controls. Workspace creation may depend on completion of required onboarding information and designation of customer administrators.

PS-5 SSO and SCIM

When SSO is enabled, Redwood Systems may connect a supported identity provider using SAML 2.0 or OpenID Connect. When SCIM provisioning is enabled, authorized administrators may synchronize users and groups from a supported identity provider.

The customer supplies accurate identity-provider configuration, credentials, domain information, and authorized test users. Acme Cloud supplies configuration guidance and validates connectivity within the scope of contracted onboarding services.

PS-6 Activation, expiration, and changes

Contracted entitlements become available on the start date stated in the Order Form after required account provisioning. They expire at the end of the subscription term unless renewed. Changes to quantities or product components require an executed ordering document.

PS-7 Schedule precedence

A specific product quantity, included-usage quantity, or capability stated in an executed Order Form controls over the corresponding standard value in this Product Schedule. All non-conflicting product definitions and measurement rules remain applicable.
